

INTEGRATIONS

Seamless integration with ERP- and salary systems

An easy and smooth integration with your company's ERP- and salary system is essential for a seamless experience of Acubiz EMS and Acubiz One. Therefore, our Expense Management Service can be integrated with any ERP- and salary system.

The integration with your used ERP- and salary system will result in automatic data entry. This will save your business many manual hours of work. The integration requires few informations and can be set up quickly.

WE INTEGRATE WITH:

Acubiz handles two-way integration

Master data into Acubiz:

- Financial dimensions such as cost center and projects
- Account plan
- Master data on employees

Bookkeeping files out of Acubiz:

- Bookkeeping file for financial module and eventually also creditor module with correct dimensioning of travel costs.
- File for salary system with correct payroll, rate and number

Acubiz can set up the integration interface once the master data is received. The integration can either be done as a FTP data exchange (CSV or XML file exchange) where the bookkeeping file is created automatically or as a web service data integration.

Storage of image files

Image files are located on Acubiz's EMS servers and we provide a deep link to each receipt. This way, the ERP system can find the image file and make it ready for posting.

Add-Ons

It is possible to choose different services as add-ons:

- Configuration of automatic transfer to ERP system
- Transfer of image files to the customer's own server through FTP
- Transfer of bookkeeping files through email

In addition to this, there are related add-ons such as multi-lingual account plans, dimension-controlled accounting and cost split on dimensions.
